

Aviation & Environment Conference in Australia – should we stay or should we go?

Flight emission calculations from

www.atmosfair.de

The distance from London to Sydney by air is 10562 miles (16997 km)

The emissions of one passenger on the outward flight
from "London - Heathrow" to "Sydney - Kingsford Smith"
create the climate impact of about 6440 kg CO₂.

Including the return trip the emissions amount to about 12880 kg CO₂.
